

Application for Admission to  
BIOL 183L-Undergraduate Research in EE Biology

BIOL 183L is a course for students who are working on field or laboratory projects with EEB faculty and who want to receive upper division credit towards their degree for their research. This course is designed for students considering a career based on biological research and is not appropriate for students who merely seek upper division credit.

Enrollment in BIOL183L depends upon:

- 1) Consent of the instructor for BIOL 183L.
- 2) Consent of an EEB faculty member in whose lab you will conduct your research. You must have a faculty sponsor prior to enrolling in BIOL 183L. Note that many faculty will expect a multi-quarter commitment from students who wish to work in their lab. If you are looking for a lab in which to work, look at the faculty research summaries on the EEB website (<http://www.biology.ucsc.edu/eeb/faculty.html>).
- 3) Enrollment in one of the EEB majors and at least one upper division course in ecology (BIOL 150, 160, 169), evolution (BIOL 175), behavior (e.g., BIOL 140), or physiology (BIOL 131, 132, 166 or ENVS 162).

This is a 5 unit course and it is expected that students will spend 12-16 hours per week on their projects. In addition, the instructor and all students in BIOL 183L will meet once a week for one hour.

The faculty sponsor will evaluate each student based upon their performance on their projects and any other criteria listed above. In addition, students will be evaluated by their performance in class discussions, assignments and oral presentations in the weekly class sessions. Attendance at weekly classes is mandatory.

**SIGNATURES**

**Faculty Sponsor:** I have reviewed and agree with this plan. I will provide any field or lab-specific safety instruction not covered in the standard training provided by the campus EH&S. I confirm that the student will receive training equivalent to a 5 unit, upper division biology lab or field course.
